**Subject: Notice of Errata – Combined Phase I/II Targeted Brownfield's Assessment:
Kekaha Sugar mill**

Dear Ms. Calisay:

The report titled *Phase I/II Investigation Targeted Brownfields's Assessment: Kekaha Sugar Mill* submitted by Weston Solutions, Inc. in August, 2011 contained the following erroneous information:

- Section 6.1.3, Bioaccessible Arsenic Soil and Sediment Sampling Results, page 15, first paragraph stated: *"The results of the bio-accessible arsenic testing were compared to the HDOH Tier II action level of 23 mg/Kg, which applies to both Residential/Unrestricted and Commercial/Industrial land use"*.

The corrected sentence is as follows: *"The results of the bio-accessible arsenic testing were compared to the HDOH Tier II action level of 23 mg/Kg, which applies Residential/Unrestricted land use, and the HDOH Tier II action level of 95 mg/Kg, which applies to Commercial/Industrial land use."*

- Section 8.0, Findings, Conclusions and Recommendations, page 20, second bullet, second sentence stated: *"These results exceeded the HDOH Tier II EAL of 23 mg/Kg for both Residential/Unrestricted and Commercial/Industrial land use"*.

The corrected sentence is as follows: *"These results exceeded the HDOH Tier II EAL of 23 mg/Kg for Residential/Unrestricted, but not for the HDOH Tier II EAL of 95.0 mg/Kg for Commercial/Industrial land use."*

- Section 8.0, Findings, Conclusions and Recommendations, page 20, third bullet, second sentence stated: “*These results exceeded the HDOH Tier I EAL of 0.00024 mg/Kg for both Residential/Unrestricted and 0.0015 mg/Kg for Commercial/Industrial land use*”.

The corrected sentences are as follows: “*The result for DU FHMA-03 (0.0018 mg/Kg) exceeded the HDOH Tier II EAL of 0.00024 mg/Kg for both Residential/Unrestricted and 0.0015 mg/Kg for Commercial/Industrial land use. However, the results for DUs FHMA-05 (0.00062 mg/Kg) and FHMA-06 (0.00077 mg/Kg) only exceeded the HDOH Tier II EAL for Residential/Unrestricted land use.*”

- Figure 6-1, Decision Unit Testing Results that Exceed Action levels Findings, corrected by adding “*95.0 mg/Kg Commercial/Industrial*” to the legend, which is the bio-accessible action level for commercial/Industrial land use.

Please do not hesitate to contact me if you have any questions or comments or require any additional information.

Sincerely,

A handwritten signature in cursive script, appearing to read "Samantha Leskie".
